

Science - Pippin Class

Common Plants

Parts of a plant

Key Vocabulary

Plant	A plant is a living organism.
Garden Plants	Garden plants are planted by humans and need looking after.
Wild Plants	Wild plants are plants that grow without the help of people.
Evergreen	Evergreen trees are trees that keep their green colour all year long and do not lose their leaves.
Deciduous	Deciduous trees are trees that lose their leaves in Autumn time. The leaves dry out and usually change colour.
Seed	Plants make their own seeds which grow into new plants.
Germination	When the conditions are right a seed will absorb water until it swells and a new plant bursts out of the shell.
Seed dispersal	Flowering plants produce fruit which contain seeds. The seeds then get dispersed in a range of methods.

What plants need to grow and stay healthy

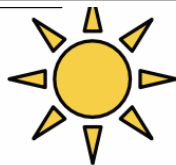

Water

Soil

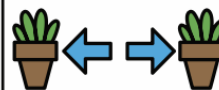

Suitable temperature

Sunlight

Time and space

Seed dispersal is when seeds move away from the plant.

Explosion (burst or shake)

Water

Animals (Eating or stuck)

Wind

Buried (dropped and rolled)
